There are few pandas alive now. The Chinese are trying to make bamboo for pandas. They ask everyone in the country to help them.

1. Who have destroyed forests? a. humans  b. hunters
2. Where do pandas live? .....
3. There are few pandas a live now.  True  False
4. Panda is not an endangered animal.  True  False

The solar system is the sun and the objects that go around it. The sun is a star like the other stars in the sky but it is much closer to the Earth. There are eight planets that go around the sun, too. These planets, in order, are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Earth is between Venus and Mars.

1. The sun and the objects that go around it is called -----.  
a) planets    b) moon    c) the solar system    d) stars
2. The sun is a planet.    True     False
3. How many planets are there that go around the sun?
4. Which planet is between Venus and Mars? a) Earth    b) Jupiter

Solar system is the name for the Sun and the planets that go around it. Jupiter is one of the eight planets of our solar system. Jupiter is larger than all the other planets in the solar system. It is 1300 times larger than Earth, the planet that we live on. It is a very cold planet because it is too far from the sun. It also has sixty seven moons. One of its biggest moon is even bigger than Mercury. The farthest planet from the sun is Neptune and the closest one is Mercury.

1. What is the solar system?
2. What is the farthest planet from the sun?
3. What is the closest planet to the sun?
4. What does the underlined it in line 3 refer to?
  - a. Sun
  - b. Solar system
  - c. Mercury
  - d. Jupiter
5. Jupiter is the largest planet in the solar system. True  False
6. Jupiter has 67 moons. True  False
7. Living things cannot live on Jupiter because it -----,
  - a. is very big
  - b. is the nearest planet to the sun
  - c. is very cold
  - d. is a planet

Snow leopards are big cats. They are endangered animals. This means that they will die out soon. They live in the mountains of Asia. Their mountain homes are very cold. Some of the countries where they live are China and India. People do not often see this animal. That makes it hard to know how many of them are living. About 600 live in zoos around the world. There are 6,000 of them still living, but there may be only half of them.

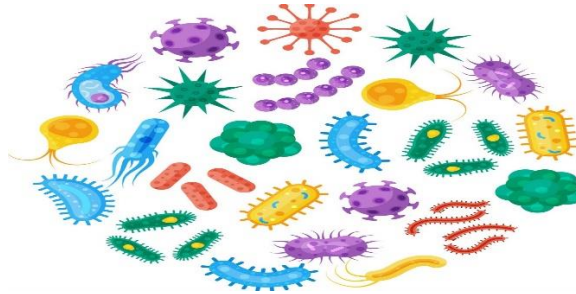

- 1) Endangered Snow leopards don't live in -----,
  - a) zoos
  - b) plains
  - c) India and China
  - d) mountains of Asia
- 2) There are about ----- snow leopards live in the zoos.
  - a) sixty
  - b) six thousand
  - c) six hundred
  - d) six
- 3) We know the number of snow leopards. True  False
- 4) We can find a lot of snow leopards alive in the world. True  False
- 5) Their natural homes are very hot and dry. True  False
- 6) Snow leopards are alike small tigers. True  False

Bacteria and viruses are two important types of microbes. Bacteria are really important microbes. They are very small. They have only one cell. Bacteria can live in any area of the earth. They aren't all bad; in fact you couldn't live without some bacteria!

Viruses are among the smallest microbes on the earth, even smaller than bacteria. They are different from bacteria because they cannot live on their own. Viruses need to be inside a living cell to live and grow. There aren't many good things about viruses. They usually attack your body and make you sick!

1. Where can bacteria live? .....
2. How are viruses different from bacteria? .....
3. Microbe is an important type of bacteria.     True                       False
4. Viruses are as big as bacteria.                 True                       False
5. Bacteria have one cell.                         True                       False
6. Viruses can live in any place in the world.    True                       False

Viruses are among the smallest microbes on the earth, even smaller than bacteria. They are different from bacteria because they cannot live on their own. Viruses need to be inside a living cell to live and grow. There aren't many good things about viruses - they usually attack your body and make you sick.

1. Viruses are as big as bacteria.                 True                       False
2. Bacteria can live on their own.                 True                       False
3. "Viruses need to be inside a living cell to live and grow." This means.....
  - a) A living cell needs viruses to live and grow.
  - b) Our body needs viruses to live and grow.
  - c) Viruses need to live and grow.
  - d) In a living cell, viruses can live and grow.
4. Why aren't there many good things about viruses?

We have different school subjects for example English, biology, geography, history and etc. We study about Earth and other planets in geography. They go around the Sun in different orbits. They have different colors and sizes. We can see the planets with a telescope. Jupiter is the largest one. It has more than sixty moons. Learning about planet is really interesting.

- 1- We learn about our planet in history.  True  False
- 2- Planets go around the sun.  True  False
- 3- What is the largest planet?
- 4- What do we learn in geography?

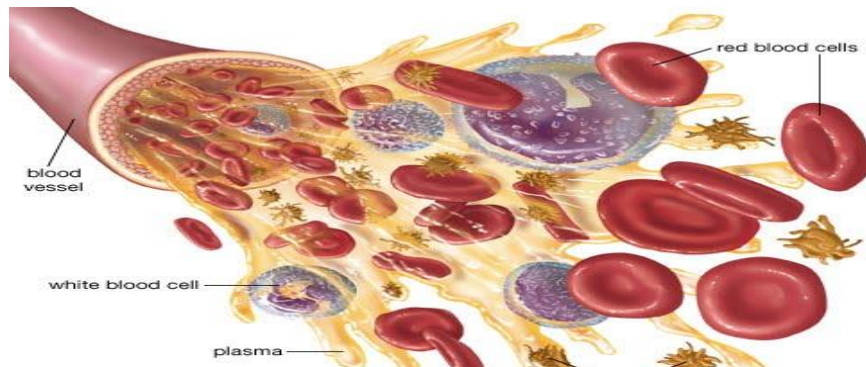

Mr. Alavi is a teacher. Tomorrow, he and his students are going to go on a school trip. They are going to go to a park out of the city. They are going to leave the school at 9. They are going to stay in the park till afternoon. They are going to go into nature and clean it. They are going to visit the aquarium in the park, too. Mr. Alavi is going to talk about sea animals there. The students are going to write a report from this trip. They need to pay attention to everything they see. Other students are going to read their friends' reports and learn many things about nature and sea animals.

- 1) Are the students going to go to a zoo?
- 2) Is Mr. Alavi going to read the student's reports?
- 3) What are they going to do in the park?
- 4) When are they going to leave the school?
- 5) Who is going to write a report from this trip?
- 6) Mr. Alavi is going to talk about wild animals.  True  False
- 7) They are going to clean nature.  True  False

One of the most wonderful parts of our body is blood. It is a red liquid that goes around our body to keep us healthy and alive. In fact, it goes around our body because our heart pumps it all the time.

There are red cells, white cells and plasma in blood. Each of them does a special job. Red cells carry oxygen and collect carbon dioxide from body parts. White cells are like brave soldiers. They defend our body against microbes. Plasma is a yellow liquid that carries red and white cells. More than half of the blood is plasma.

1. Do white cells carry oxygen?
2. What do red cells do?
3. What color is plasma?
4. How much of the blood is plasma?
5. What does the plasma do?
6. The heart pumps blood round the body.       True                       False
7. There are only white cells in plasma.       True                       False

Today, there are some endangered animals on Earth. It means that we can find only a few of them around us. Some examples are whales, pandas, tigers and Asian elephants.

Humans destroy the natural homes of the animals in the forests, lakes, and plains. When the number of people on Earth increases, they need more places for living. They cut down trees and destroy lakes. They make homes and roads instead. Then the animals won't have a place to live. They will die out.

The Iranian cheetah is among these animals. This wild animal lives only in the plains of Iran. Now there are only a few Iranian cheetahs alive. If people take care of them, there is hope for this beautiful animal to live.

**1. Who destroys the natural homes of the animals?**

**2. When people take care of cheetahs, their number will increase.**

True                       False

**3. Which place is not a natural home of wild animals?**

a. plains                      b. roads                      c. lakes                      d. forests

**4. When only a few numbers of an animal live on Earth, -----.**

- a. it means that it is an endangered animal
- b. their number increases
- c. the animals will live in the future
- d. they need more places for living

**5. People cut down trees and destroy lakes because -----.**

- a. the animals are endangered
- b. some animals died out
- c. the animals don't have a place to live
- d. they need more places for living

**6. The Iranian cheetah -----**

- a. destroys forests                      b. lives in many countries
- c. died out                                  d. is an endangered animal

***Good luck***
